

Neste Oil hakee moottorialan diplomi-insinööriä.

Lisätietoja myös prof martti Larmi martti.larmi@tkk.fi

Neste Oil Corporation is a refining and marketing company, with a focus on advanced, clean traffic fuels and a strategy aimed at growing the company's oil refining operations and production of premium-quality renewable diesel. Neste Oil's modern refineries are located in Porvoo and Naantali in Finland. Most of our products are based on our own technology, including fuels produced from renewable raw materials. The company also has an extensive retail network in Finland and around the Baltic Rim, and a modern crude and product tanker fleet. Neste Oil currently employs around 5,100 people.

Research and Technology is responsible for developing new products and production technologies as well as expert and laboratory services needed by Neste Oil.

The Products Team at our Research and Technology unit is specialized to design and also perform product development projects and serves our production, sales and customers in problem solving tasks as well as in expert services.

The Products Team in Porvoo is looking for a

Product Development Engineer

You will be an important part of domestic and international test projects involving our renewable fuels. You will also support our sales of renewable fuels by discussing and consulting with, for example, fleet operators, automotive and engine manufacturers.

We require updated engine knowledge, good communication skills in Finnish and English. After your introduction period, you should be prepared to travel. We appreciate Master's degree in mechanical engineering, team player and networking skills.

The person selected for the position must pass a health examination that also includes a drug test.
